

SINCE 1987

*Trusting the forest*

**F**RMi forest engineers look after tropical forest ecosystems worldwide. In the field, we work to improve knowledge and consideration for the natural tropical forests. We promote a sustainable and reasoned management of the forest, natural and rural resources and the development of forest territories with the local populations, economic operators and authorities.

**C**onsulting or long term interventions by FRMi experts rely on the most up-to-date technologies and draw on the latest progress of scientific research.

**O**ur objectives :

- better know forest ecosystems to optimize their management;
- ensure the future of their social and ecologic functions;
- contribute to a fair redistribution of the generated income;
- protect biodiversity;
- enable a selective and sustainable wood harvest;
- reduce negative impacts on the ecosystems;
- encourage a better use of by-products and offcuts in logging and wood processing operations for energy saving purposes;
- make the most of biomass and forest carbon prospects.

**D**r. Bernard CASSAGNE, a registered Forestry Expert and International Consultant in tropical forest management and assistance to the timber sector, founded FORET RESSOURCES MANAGEMENT in 1987, parent company to FRMi within the FRM Group.

**A** private and independent forest engineering consulting agency based in the South of France, FRMi supports the forest and wood sector actors in all forest regions of the planet.

**T**o promote a better approach for the safeguarding of tropical forests, our keywords are proximity, scientific rigueur, pragmatism, capacity building and dialogue.
